

# Overview of the Interaction between Obesity, Diabetes and Cancer Therapy

Derek LeRoith MD PhD

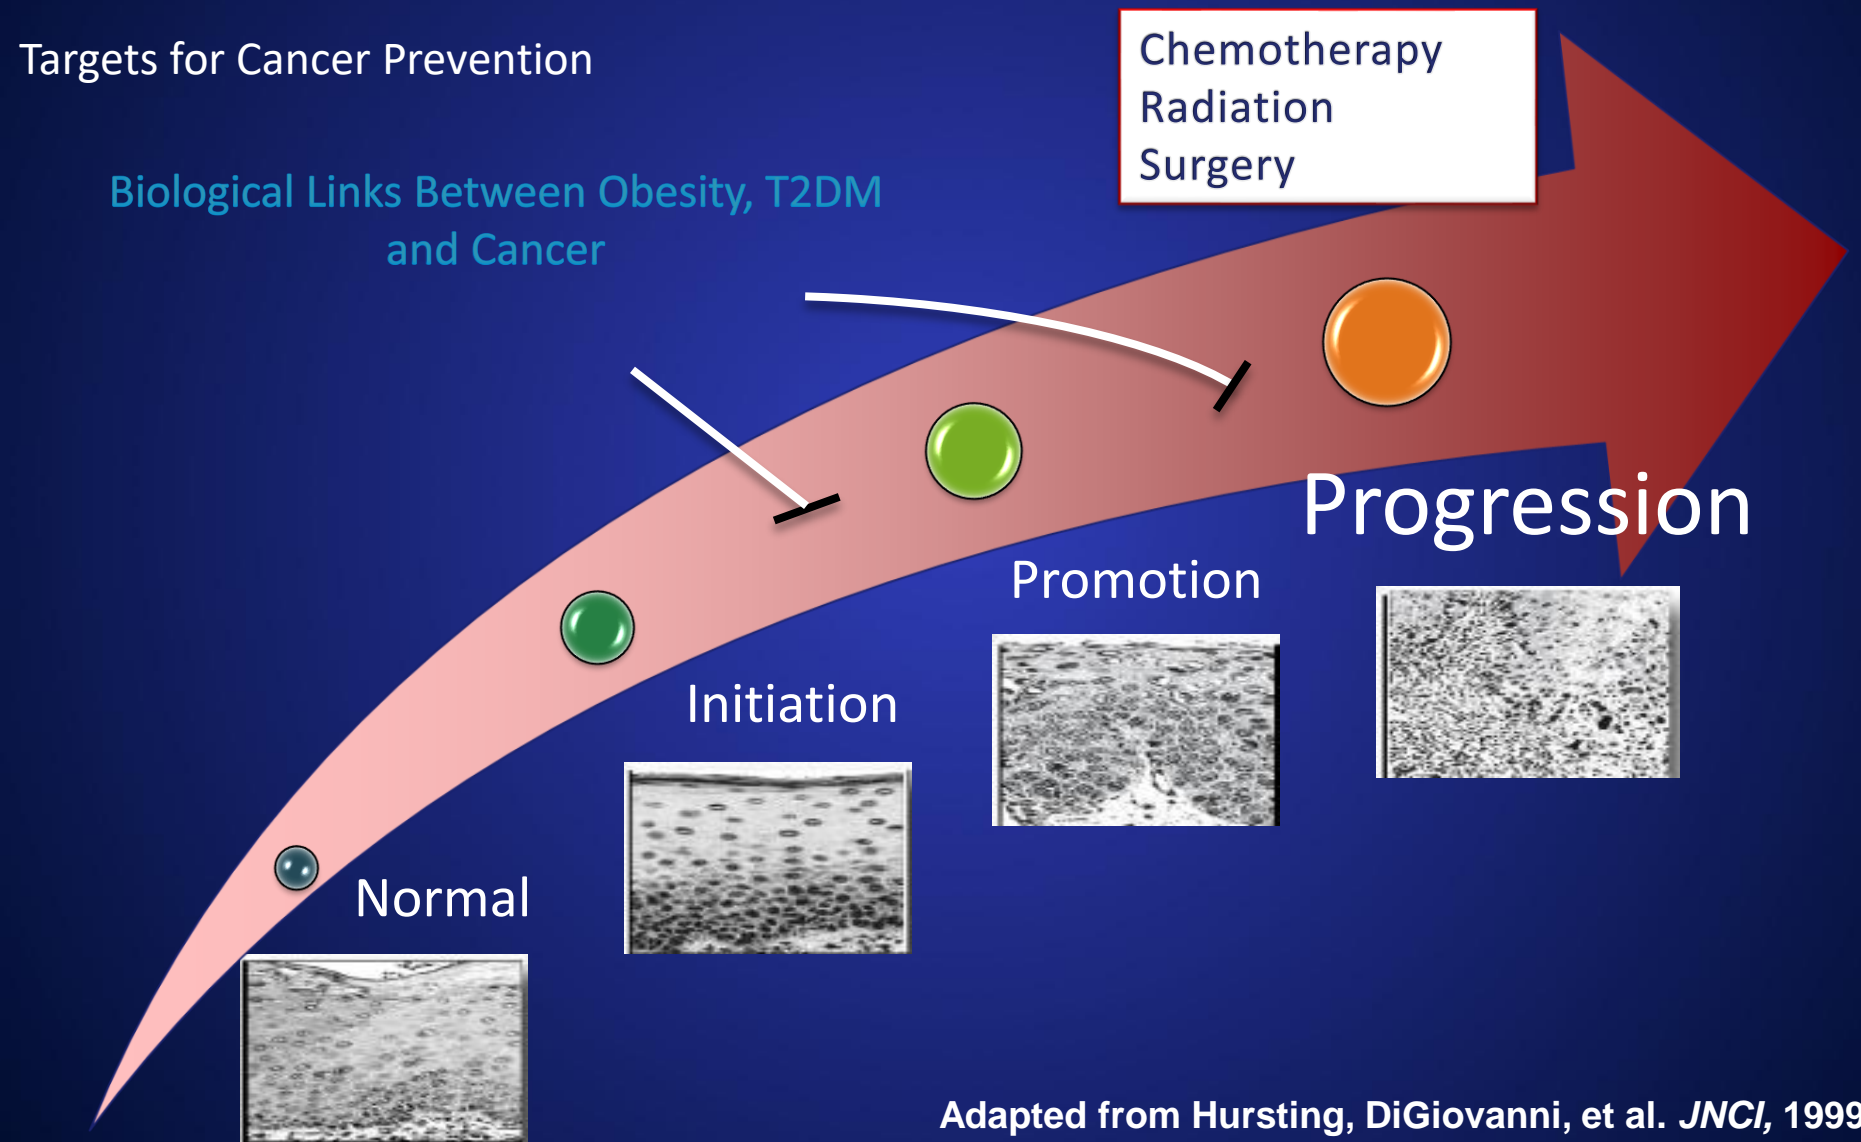

Icahn School of Medicine at Mt Sinai, NYC

# Potential Conflicts

Consult with:

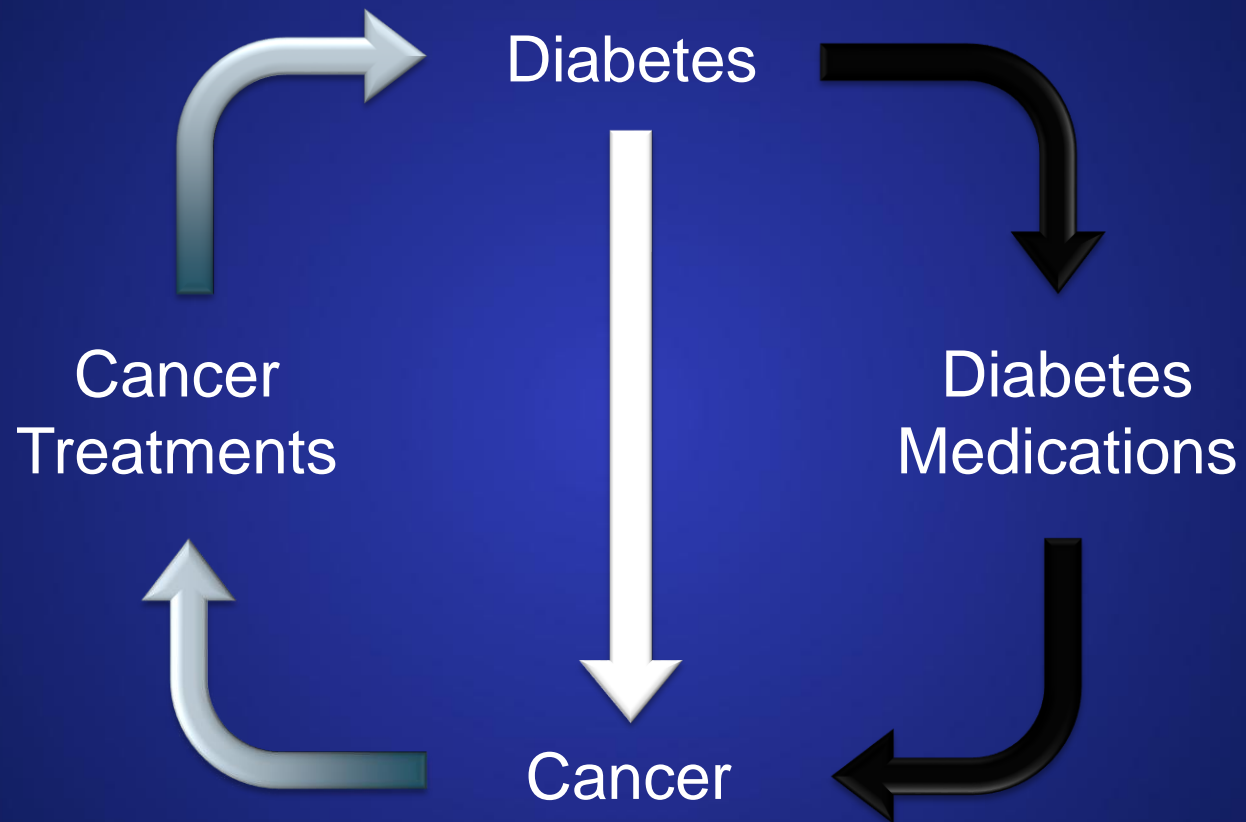

- Astrazeneca
- Johnson and Johnson
- Mannkind

# Multistage Carcinogenesis

Adapted from Hursting, DiGiovanni, et al. *JNCI*, 1999

# Cancer and Diabetes

# Outline

- Epidemiology of Diabetes and the increased Cancer risk
- Potential mechanisms explaining this association

# Cancer Deaths Associated with Obesity

# Does Bariatric Surgery Affect Mortality?

## Utah Obesity Surgery Study

- Retrospective cohort study
  - 9949 gastric bypass patients
  - 9628 severely obese driver's license applicants (BMI  $\geq 35$  kg/m<sup>2</sup>)

# Does Bariatric Surgery Affect Mortality?

	Surgery Group (#/10,000 person-yr)	Control Group (#/10,000 person-yr)
<b>All causes of death</b>	37.2	61.1
CV disease	8.5	19.3
Diabetes	0.3	3.5
<b>Cancer</b>	<b>5.4</b>	<b>15</b>
Other disease	11.4	17
<b>Non-disease causes</b>		
Accident	3.7	2.7
Poisoning	1.9	0.6
Suicide	2.7	1.2

# T2DM is associated with an increased risk of cancer at specific sites

# Potential Mechanisms Linking Type 2 Diabetes and Cancer

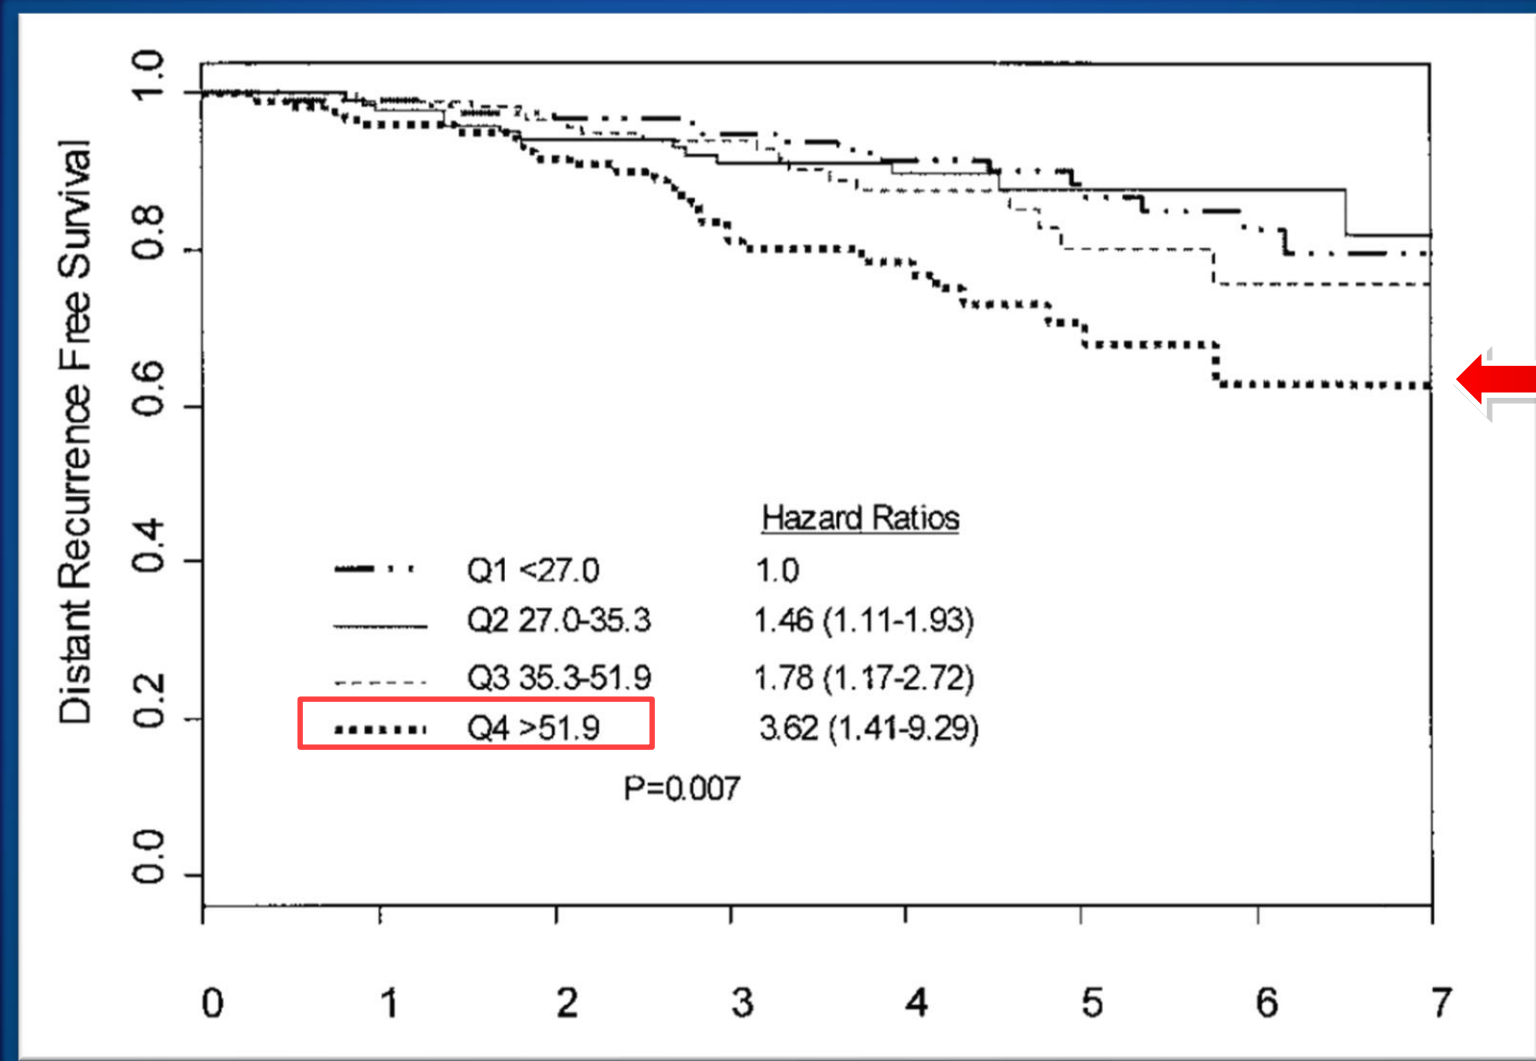

# Relative risk of pancreatic cancer and **Insulin / C-peptide** level

Pisani et al. Archives of Physiology and Biochemistry 2008; 114(1): 63-70

# Strategies to Reduce Tumor-Promoting Activity in T2DM

# Reduction of Mammary Tumors Using a Tyrosine Kinase Inhibitor, Despite the Marked Hyperinsulinemia

**IR-A**

Metabolic  
and Mitogenic  
Effects

**IR-B**

Metabolic  
Effects

Study	Number of participants	Association studied	OR/HR
Framingham Offspring Cohort	3,278	VLDL-C and overall cancer risk	1.54
Atherosclerosis Risk in Communities (ARIC)	7,575	Low HDL-C (<50 mg/dL) and breast cancer incidence	1.67*
Malmö Preventive Project (Sweden)	9,738	Total cholesterol and breast cancer risk	1.64**
Furberg et al., 2004 (Norway)	38,823	HDL-C (>1.64 mmol/L vs <1.20 mmol/L) and breast cancer risk	0.43**
EBBA study (Norway)	206	HDL-C, TC, LDL-C/HDL-C and mammographic parenchymal pattern	1.77 (HDL-C) 0.54 (TC) 0.60 (L/H)
ATBC Cancer Prevention Study (Finland)	27,074	HDL-C (highest vs lowest quintile) and risk of Non-Hodgkin Lymphoma	0.35
Andreotti et al., 2008 (China)	460+858	HDL-C (lowest vs median quintile) and gallbladder/bile duct cancer risk	11.63/16.81
Magura et al., 2008 (North Dakota)	312+319	Total cholesterol, LDL-C (high vs normal), HDL-C (low vs normal) and prostate cancer risk	1.64 (TC) 1.60 (LDL-C) 1.57 (HDL-C)
Atherosclerosis Risk in Communities (ARIC)	14,547	Low HDL-C and lung cancer incidence	1.45

# **Does dyslipidemia affect breast carcinogenesis independently of insulin resistance?**

Epidemiological studies have shown an association between hyperlipidemia and cancer risk

Recent NEJM article demonstrated that statins reduce cancer-mortality.

Nielsen NEJM 2013

## **Animal Model of Hyperlipidemia**

ApoE<sup>-/-</sup> mice cannot take up TG and Chol into tissues, therefore have increased circulating chol and TG in blood stream, but are insulin sensitive and do not have hyperinsulinemia.
